

U. S. ATOMIC ENERGY COMMISSION

REGULATORY GUIDE

DIRECTORATE OF REGULATORY STANDARDS

REGULATORY GUIDE 8.1

RADIATION SYMBOL

A. INTRODUCTION

Section 20.203 of 10 CFR Part 20, "Standards for Protection Against Radiation," sets forth requirements for caution signs, labels, signals, and controls, including a radiation symbol, to be used in conjunction with specified wording in posting areas where radioactive material or radiation is or may be present and in labeling containers of radioactive material. This guide defines the characteristics of an acceptable radiation symbol in terms of shape, proportion, color of symbol and background, and usage.

B. DISCUSSION

Committee N12 of the American National Standards Institute, Inc. (ANSI), Nuclear Terminology, Units, Symbols, Identifications, and Signals, prepared the standard on the radiation symbol, ANSI N2.1-1969¹,

¹Copies may be obtained from the American National Standards Institute, Inc., 1430 Broadway, New York, New York 10018

which was approved by ANSI on October 27, 1969. A unique radiation symbol is essential in order to assure recognition of radioactive materials and items or areas in which radioactive material or radiation is or may be present.

C. REGULATORY POSITION

The characteristics of the radiation symbol described in ANSI N2.1-1969, "Radiation symbol," are consistent with the provisions of §20.203, "Caution signs, labels, signals, and controls," of 10 CFR Part 20 and are generally acceptable for use wherever such a symbol may be needed. In some cases, such as applications involving high temperatures which destroy paints of the prescribed colors, exceptions to the standards may be necessary. Determination of such exceptions will be made by the Regulatory staff on an individual case basis.

USNRC REGULATORY GUIDES

Regulatory Guides are issued to describe and make available to the public such information as methods acceptable to the NRC staff for implementing specific parts of the Commission's regulations, techniques used by the staff in evaluating specific problems or postulated accidents, and data needed by the NRC staff in its review of applications for permits and licenses. Regulatory guides are not substitutes for regulations, and compliance with them is not required. Methods and solutions different from those set out in the guides will be acceptable if they provide a basis for the findings requisite to the issuance or continuance of a permit or license by the Commission.

This guide was issued after consideration of comments received from the public. Comments and suggestions for improvements in these guides are encouraged at all times, and guides will be revised, as appropriate, to accommodate comments and to reflect new information or experience.

Written comments may be submitted to the Rules Review and Directives Branch, DFIPS, ADM, U. S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

The guides are issued in the following ten broad divisions:

- | | |
|-----------------------------------|-----------------------------------|
| 1. Power Reactors | 6. Products |
| 2. Research and Test Reactors | 7. Transportation |
| 3. Fuels and Materials Facilities | 8. Occupational Health |
| 4. Environmental and Siting | 9. Antitrust and Financial Review |
| 5. Materials and Plant Protection | 10. General |

Single copies of regulatory guides may be obtained free of charge by writing the Office of Administration, Attention: Distribution and Services Section, U. S. Nuclear Regulatory Commission, Washington, DC 20555-0001; or by fax at (301)415-2260.

Issued guides may also be purchased from the National Technical Information Service on a standing order basis. Details on this service may be obtained by writing NTIS, 5285 Port Royal Road, Springfield, VA 22161.
